ChemPro Group hires two senior managers

Boonton, New Jersey—The ChemPro Group LLC, a full-service design-build company specializing in modular process solutions, prefabrication assemblies, and overall project management, recently added two expert managers to support the company in its expanding business.

John McIntyre, P.E., Process Manager, has over 30 years of process design experience in the chemical, refining, industrial gas, and biotechnology industries. Prior to joining ChemPro John worked for Pennzoil, DuPont, Union Carbide, Abbott Laboratories, Aker-Kvaerner (formerly John Brown), and Glitsch Technology Corp. Areas of expertise include VLE and VLLE data regression from pilot data, equilibrium stage and HETP/HETS calculations, computer simulation of unit operations and of complete batch and continuous processes, heat and mass transfer, distillation design, tower layout and design of internals, reactor scale-up and design, agitator and sparger design, heat exchanger thermal design, waste heat boilers, economizers, furnace layout, and vacuum system design. He is a seasoned veteran in plant scale-up, de-bottlenecking, and trouble-shooting of existing operations. John has Bachelors and Masters degrees from Montana State University in Chemical Engineering and holds two patents in extractive distillation.

Joe Serino, Procurement Manager, is an experienced procurement professional with over 30 years of business, purchasing, forecasting, expediting, project scheduling (using CPM, GANTT, and PERT techniques), and logistics experience, mostly in the modular process plant and chemical processing equipment industries. Since 1979 Joe has been buying equipment, goods, and services as the Purchasing Agent for Chem-Pro Equipment Corporation, the Purchasing Manager for Glitsch Package Plants and Glitsch Process Systems, and a Procurement Contracts Specialist for the State of New Jersey Transit Agency, New Jersey Transit. Joe is a graduate of Trenton State College (The College of New Jersey) and holds a Bachelor of Science degree.

The ChemPro Group LLC's core business is prefabricated modular process equipment and systems, including skid-mounted equipment, multiple-module standalone units, and multi-unit complete process plants. ChemPro's expertise integrates pre-project planning, process conceptualization and design, equipment engineering, detailed design, modular fabrication, and technical support. The company's specialty is state-of-the-art techniques and project controls to design and deliver complete modular process packages quickly and cost-effectively, with minimal effect on existing plant operations.
